

THE KEY TO A GOOD LIFE IS A GREAT PLAN

HealthTALK

Did you know?

Skin cancer is diagnosed more than all other types of cancer combined. Ultraviolet (UV) light is the main cause of skin cancer. UV light comes from sunlight and tanning beds. Using sunscreen, covering up, and avoiding tanning beds can help prevent skin cancer.

Health4Me

Your health in your hands

UnitedHealthcare Health4Me™ is a mobile app to easily access your health plan information. It's built to be your go-to health care resource when you're on the go.

- Find nearby providers, hospitals and urgent care clinics.
- See your health plan benefits.
- Pull up your member ID card.
- Receive important benefit and health care notifications.
- View your Member Handbook.
- Connect with helpful professionals.

Get started. Open the app store on your iPhone or Google Play on your Android phone.

Download the app. Use your **myuhc.com** credentials to log in, or enter your member ID card information to register.

Members only

You can get important information about your health plan anytime at myuhc.com/CommunityPlan. At this secure site, you can view your ID card, find a provider, take a health assessment, learn about your benefits, and more. Register today and start getting more from your benefits. It's quick and easy:

1. Go to myuhc.com/CommunityPlan.
2. Click on Register Now. You will need your member ID card, or you can use your Social Security number and date of birth to register.
3. Follow the step-by-step instructions.

Under control

Tests for people with diabetes

If you are diabetic, you need to make your health a priority. It takes constant, careful monitoring to keep diabetes under control. Regular testing helps you see how you're doing. Have you gotten these tests recently?

A1c blood test: This lab test shows how well your blood sugar has been controlled over the last 2 to 3 months. It tells you how well your treatment is working. Get this test two to four times per year.

Heart disease: People with diabetes have double the risk of heart disease. Controlling your cholesterol and blood pressure can protect your heart. Get your cholesterol checked once a year or when your doctor says you should. Get your blood pressure checked at every visit.

Kidney function: Diabetes can damage your kidneys. This blood test makes sure yours are working right. Get this test once a year.

Dilated eye exam: High blood sugar can cause blindness. In this test, eye drops make your pupils bigger so your retina can be checked. It helps find problems before you notice them. Get this test once a year.

We care for you

UnitedHealthcare Community Plan offers care management services. They are available to children and adults with special health care needs. If you have a chronic health condition, like asthma or diabetes, you may benefit from our care management program. We can help with a number of things, like scheduling doctor appointments and keeping all your providers informed about the care you get.

Help is here. Call Member Services toll-free at **1-800-895-2017 (TTY 711)** to ask about programs that can help you or your family.

We make it easy. These tests are covered benefits. If you need help making an appointment or getting to the doctor, call Member Services at **1-800-895-2017 (TTY 711)**.

Teen time

Checkups are important at adolescence.

Checkups help keep kids healthy at any age. Even preteens and teenagers should see the doctor for a well visit each year. These visits make sure your child is maturing well. Your child's body mass index (BMI) will be measured. BMI uses height and weight to see if your child weighs too much or too little.

The doctor and your child can discuss risky behaviors. These include substance abuse and safety. Sexual health will also be discussed. Plus, your child will get any shots or tests he or she needs.

When the preteen years start, it's time for another round of shots. Tdap, HPV and meningococcal vaccines are recommended for most 11- to 12-year-olds. In addition, teens need a booster of the meningococcal vaccine at age 16.

Get guidance. Preventive guidelines for your whole family are available. This document says what tests and shots are needed and when. Visit myUHC.com/CommunityPlan or call **1-800-895-2017 (TTY 711)** to get a copy.

Ask Dr. Health E. Hound

Q: How can I help my child stay safe on a bicycle?

A: It's fun to be active outdoors. Riding a bike is a great way to get around. It's good exercise, too. Make every ride a safe ride with these tips.

Wear a helmet. Get a helmet habit started the very first time your child rides a tricycle or is a passenger on an adult bike. Use only helmets designed for bike riding. Show your child how important it is by wearing a helmet yourself. Falls can happen anywhere, so make sure your child wears a helmet every time he or she rides.

Teach traffic safety. Teach your child the rules of the road. Show your child how to stop and look all ways before crossing or entering a street. Tell him or her to ride on the right side, with traffic, and obey traffic signs and signals.

Use right-sized bikes. Don't buy a large bike for your child to grow into. Bikes that are too big are hard to control. A well-fitting bike will allow your child to put the balls of his or her feet on the ground.

Stay safe. Get more tips for keeping your children safe and healthy. Find out how to treat the sunburns, bug bites and skinned knees common in summer. Visit KidsHealth.org.

A one-two punch

The HPV vaccine and Pap tests

Human papillomavirus (HPV) is a common sexually transmitted infection. Sometimes, it causes cancer. It leads to most cases of cervical cancer in women. It also causes some anal and oral cancers in both men and women.

There is a vaccine for HPV. It works best when given before teens become sexually active. Boys and girls should get it at age 11 or 12. But it can be given as early as age 9 or as late as age 26. Ask about it at your preteen's next checkup.

The HPV vaccine wasn't available when today's adults were preteens. Women should continue to get screened for cervical cancer with Pap tests.

It's a quick and simple test that looks for early signs of cancer. Your doctor uses a brush or swab to collect some cells from your cervix. A lab looks at the cells under a microscope. Pap tests are recommended every three years.
